Investment Risk Disclosure

Investment Risk Disclosure for omnichain.ca and the Omnichain ecosystem. Published 2026-10-25. Download this disclosure (PDF).

The utility position, in plain words

Omnichain tokens are **utility instruments**. They are earned through participation, held to access platform features (token gates are holds — nothing is spent to pass them), and spent on services inside the ecosystem. They are **not offered or sold as investments**. Nothing on this site — including the whitepaper, the guide, and any dashboard figure — is financial advice, an offer of securities, or a promise of profit, return, or future value. Read the risks below before participating, and only participate with funds you can afford to lose entirely.

The risks

- **Market prices can move, and can go to zero.** On community (holder-to-holder) markets, token prices are set by buyers and sellers. A token's market price can fall sharply or become worthless, and there may be no buyer when you want to sell.
- **The treasury utility price is a convention, not a guarantee.** The fixed price of 1 token = 1 AVAX at the treasury is a pricing convention for access to the platform. It is not a guarantee of market value, not a redemption promise, and not a floor under any market price.
- **AVAX is volatile.** The ecosystem runs on AVAX. AVAX's market price moves substantially, which changes the real-world value of anything priced or held in it.
- **Smart contracts can contain bugs.** The token contracts, the exchange settlement contract, and the payout contracts are software. Despite testing and live verification, a defect or exploit could cause loss of tokens held by a contract, and blockchain transactions generally cannot be reversed.
- **Exchange inventory is finite.** Swaps are paid from the exchange's own token inventory. If the inventory of a token is exhausted, swaps into that token cannot be filled at that size until it is replenished; a swap that cannot be filled simply does not execute.
- **Self-custody risk is yours.** You hold your own wallet. If you lose your private key or Secret Recovery Phrase, your assets are lost permanently — there is no recovery service, no password reset, and no one who can restore access. If someone else obtains your phrase, they can take your assets.
- **Regulatory rules can change.** Laws and regulations affecting digital assets, exchanges, and token platforms in Canada and elsewhere can change, and could restrict or end parts of the platform's operation.
- **Technology and network risks.** The platform depends on the Avalanche network, hosting infrastructure, and third-party services such as OCR processing. Outages, congestion, or failures in any of these can delay or prevent transactions, uploads, anchors, or payouts.
- **Platform discretion.** Documents flagged by fraud review earn nothing unless cleared; features, gates, and rules can be updated as the platform develops. Figures such as allocation amounts describe the current published model, not a contractual entitlement to future earnings.

Your responsibility

Only participate with funds you can afford to lose entirely. Do your own research, verify contract addresses before transacting, and consult a licensed financial advisor about your personal situation. If any part of these risks is unacceptable to you, do not participate.
